What's new in FortiManager 6.0.1

The following is a list of new features and enhancements in 6.0.1. For details, see the *FortiManager Administrator Guide*:

Not all features/enhancements listed below are supported on all models

Central Change Management

The following Central Change Management features and enhancements have been added

AP Manager

Added AP Manager enhancements to support BlueTooth, QoS and Hotspot 2.

FortiSwitch Manager

Added Dynamic Mapping for VLANs.

Fabric Connectors

Fabric Connectors bug fixes and improvements.

System Settings

Added one click ADOM upgrade support from 5.6 ADOM > 6.0 ADOM.

FortiManager ServiceNow Connector

The Security Operations FortiManager Integration version 1.1.19 application is now available on ServiceNow store. This app enables users to respond to incidents quickly and contain security threats. For more information, see <https://store.servicenow.com>.

See also the *Security Operations FortiManager 6.0.1 Integration App 1.1 User Guide* on the [Document Library](#).

Special Notices

This section highlights some of the operational changes that administrators should be aware of in 6.0.1.

ADOM Upgrade for FortiManager 6.0

Upgrade is available for ADOM version 5.0 to migrate to version 5.2, 5.4, and 5.6. Currently, there is no ADOM upgrade option for ADOM version 5.6 to move to version 6.0.

Reconfigure SD-WAN after Upgrade

The SD-WAN module has been fully redesigned in FortiManager v6.0 to provide granular monitor and control. Upgrading SD-WAN settings from 5.6 to 6.0 is not supported. Please reconfigure SD-WAN after upgraded to v6.0.

FortiGate VM 16/32/UL license support

FortiOS 5.4.4 introduces new VM license types to support additional vCPUs. FortiManager 5.6.0 supports these new licenses with the prefixes of FGVM16, FGVM32, and FGVMUL.

Hyper-V FortiManager-VM running on an AMD CPU

A Hyper-V FMG-VM running on a PC with an AMD CPU may experience a kernel panic. Fortinet recommends running VMs on an Intel-based PC.

VM License (VM-10K-UG) Support

FortiManager 5.4.2 introduces a new VM license (VM-10K-UG) that supports 10,000 devices. It is recommended to upgrade to FortiManager 5.4.2 or later before applying the new license to avoid benign GUI issues.

FortiOS 5.4.0 Support

With the enhancement in password encryption, FortiManager 5.4.2 and later no longer supports FortiOS 5.4.0. Please upgrade FortiGate to 5.4.2 or later.

The following ADOM versions are not affected: 5.0 and 5.2.

SSLv3 on FortiManager-VM64-AWS

Due to known vulnerabilities in the SSLv3 protocol, FortiManager-VM64-AWS only enables TLSv1 by default. All other models enable both TLSv1 and SSLv3. If you wish to disable SSLv3 support, please run:

```
config system global
set ssl-protocol tlsv1
end
```

Upgrade Information

Upgrading to FortiManager 6.0.1

You can upgrade FortiManager 5.6.0 or later directly to 6.0.1. If you are upgrading from versions earlier than 5.6.x, you should upgrade to the latest patch version of FortiManager 5.6, then 6.0.0.

For details about upgrading your FortiManager device, see the *FortiManager Upgrade Guide*.

Downgrading to previous firmware versions

FortiManager does not provide a full downgrade path. You can downgrade to a previous firmware release via the GUI or CLI, but doing so results in configuration loss. A system reset is required after the firmware downgrading process has completed. To reset the system, use the following CLI commands via a console port connection:

```
execute reset {all-settings | all-except-ip}  
execute format {disk | disk-ext4 | disk-ext3}
```

Appendix A - FortiGuard Distribution Servers (FDS)

In order for the FortiManager to request and retrieve updates from FDS, and for FortiManager to serve as a FDS, please configure the necessary settings on all devices between FortiManager and FDS, or between FortiManager and FortiGate devices based on the items listed below:

- FortiManager accesses FDS for antivirus and attack updates through TCP/SSL port 443.
- If there is a proxy server between FortiManager and FDS, FortiManager uses port 80 to communicate with the proxy server by default and connects to the proxy server using HTTP protocol.
- If FortiManager manages a FortiGate device located behind a proxy server, the proxy server permits TCP/SSL traffic to pass through via port 443.
